What is this Study?

The Illinois Department of Transportation (IDOT) is beginning a Phase I (planning) study for the improvement of the eastbound US Route 24 Bridge (Quincy Memorial Bridge) over the Mississippi River at Quincy. The west approach to the bridge is located in West Quincy, Marion County, Missouri and the east approach to the bridge is located in downtown Quincy, Illinois in Adams County.

The primary scope of the planning study is to evaluate alternatives for the improvement of the existing bridge. The alternatives may range from rehabilitating or reconstructing the existing bridge, to replacing it with a new bridge on its current alignment or a new alignment.

The Quincy Memorial Bridge over the Mississippi River was originally constructed in 1930 and has undergone several repairs since then. The existing bridge is a major connector that provides a vital eastbound transportation link between northeast Missouri and Quincy, Illinois. The existing Bayview Bridge, constructed in 1986, provides US 24 westbound travel.

A project of this significance upon local and regional transportation requires public participation and input. The public information meeting serves as introduction to the project process, study area and history. The meeting will be conducted on an informal basis, with no formal presentation planned.

We Need Your Input

In order for the Illinois Department of Transportation to develop a safe transportation solution that meets the needs of the community, it will need the help of the public (you). Throughout the study process, IDOT will be utilizing an inclusive public involvement approach, Context Sensitive Solutions (CSS), which provides opportunities for all project stakeholders to become involved. A stakeholder is anyone who could be af-

ected by the project and its outcome. The main purpose of this initial Public Informational Meeting is to introduce the project to the community and to seek members to be considered for a community advisory group. IDOT is looking for focused and direct input from local community members to help the Department in the development of the study as well as to understand the community's concerns and transportation needs.
